

# 2006-02-23 Developers Conference Call

<html><head><title></title></head><body>\* Process of adding concepts to the dictionary

- Questions about how to code particular types of observations
  - e.g. "patient has previously been exposed to AZT, from 1/15/2003 to 9/3/2003"
    - Would the proper way be like this? ("previous exposure" -> "AZT") + ("from date" -> "1/15/2003") + ("to date" -> "9/3/2003")
      - *We can discuss this...Paul will definitely have his 2¢ to add. I would imagine something like the following linked by value\_group\_id -Burke*
        - PRIOR ANTIRETROVIRAL EXPOSURE AZT
        - START DATE 2003-01-15
        - END DATE 2003-09-03
      - *Alternatively, you could make more specific concepts for dates — e.g., PRIOR ANTIRETROVIRAL START DATE.*
- PIH's revised (faster) rollout timeline
  - Data Model changes
    - Projects [Project tables quick spec](#)
    - Studies / Treatment courses
  - Data migration tools
  - Simple cohort management
  - Simple PDF reporting (using existing code)
  - Scheduling emails (e.g. weekly reports)
  - Offline data entry
  - User account management (i.e. let users request accounts, and let admins approve them)
- RG quick comments on the "install"
  - AMRS is up 'n' running
  - Immediate to-do's facing us
    - Parsing data and populating tables
    - Data edit features
    - Improved form management
    - Improved form submit and close
- TODO
  - RG to list wish list for offline data entry
