Abstract

Currently, OpenMRS uses a custom-developed mechanism for authentication & authorization. Some implementers of OpenMRS may want to use their own authentication system instead -- for example, to use a single-sign on (SSO) system between OpenMRS and another system used in an organization.

Project Champions

- TBD

Objectives

- Create abstraction for the authentication process
- Create a proof of concept where a user can authenticate using external entity

Extra Credit

- TBD

Resources

- ➕ ~~TRUNK-381~~ - Support for alternate authentication schemes `CLOSED`
