Introducing Reference Application 2.3

Taking up from Release 2.2, we are here to introduce 2.3 to the community through a scheduled release by September 2015. Reference Application 2.3 includes a release of the **platform version 1.11.4** and the initial version of **Admin UI 1.0**.

As a part of the release process, Wyclif Luyima and Maurya Kummammuru were really approachable for any release tips. Additionally, Wyclif was real quick in getting the modules released and ready for the release.

I would like to specifically thank **Mark Goodrich, Darius Jazayeri, Rafal Korytkowski, Burke Mamlin, Michael Downey, Daniel Kayiwa, Jaime Thomas, Nicholas Ingosi, Lluis Martines, Cintia Del Rio, Michael Seaton** for leading the technical issues required to be completed for the 2.3 release.

Feature highlights from Reference Application 2.3:

- 38 modules**
- OpenMRS platform 1.11.4** (Maintenance release by **Daniel Kayiwa**)
- Admin UI module** (Lead by **Wyclif Luyima**)
- Chart Search module** (Maintenance release by **Kaweesi Joseph**)
- Several bug fixes**
- Support for MariaDB**
- and various other modules worth mentioning** as below.

Contributors
