What's new in OpenMRS 1.8.2

Release date: 20 July 2011

This is a maintenance release to OpenMRS 1.8, specifically to fix a high-priority bug introduced in version 1.8.1. **If you are currently running OpenMRS 1.8.1, we recommend that you upgrade as soon as possible.** There are no database changes between OpenMRS 1.8.1 and 1.8.2. It is fully backward and forward compatible.

The three bugs fixed in OpenMRS 1.8.2 are:

- **Major:** The "last 3 encounters" box on the form entry tab of the patient dashboard was actually showing the earliest 3 encounters.
- The concept statistics page was fixed to display statistics for numeric concepts.
- Resolved Conflicting ASM Library

Resolved issues

- [\[TRUNK-2389\]](#) - Concept Stats Broken for both numeric and coded values
- [\[TRUNK-2465\]](#) - Ordering of encounters on formentry tab incorrect
- [\[TRUNK-2469\]](#) - Conflicting ASM Library

Please also see the [OpenMRS 1.8.1 Release Notes](#) and [OpenMRS 1.8.0 Release Notes](#) for additional resolved issues and new features since version 1.7.

It is highly recommended to upgrade all of your modules to their latest versions from the [OpenMRS Module Repository](#) to maximize the benefits this release has to offer. You may also visit [Performance Tuning](#) for information on how best to tune your installation of OpenMRS for best performance.

End Of Life (EOL) announcement

OpenMRS 1.5 is no longer supported

As of described in [Unsupported Releases \(EOL\)](#), OpenMRS can only support up to three released versions at a time (the current release and then two versions back). With the release of OpenMRS 1.8, support is no longer provided by the core [Development Team](#) for OpenMRS 1.5.x and earlier. This announcement also serves as advance notice that support will end for OpenMRS 1.6.x, concurrent with the release of OpenMRS 1.9.
