

# KenyaUI Module

This module is a library of all of the UI components used by [Kenya aEMR](#).

## Icons

These are based on a modified subset of the *Pretty Office Icons* set, used with permission from CustomIconDesign (<http://www.customicondesign.com>)

## Security

KenyaUI provides a simple security model which is based around [App Framework Module](#) apps. Apps have an required privilege so this model associates page controllers with apps so that access to the controller can be determined by access to an app.

See [KenyaUI App-based Security](#) for more information.
