

2006-03-16 Developers Conference Call

<html><head><title></title></head><body>* Sketch out a [Plan for Module Implementation](#)- and module-specific settings [Technical_Discussion](#)

- OpenMRS itself and each module should have...
 - a "default" properties file included
 - build.properties for OpenMRS
 - modulename-build.properties for each module
 - a "custom" properties file
 - ~/OpenMRS-build.properties for OpenMRS
 - ~/OpenMRS-modulename-build.properties for each module
 - an init method ?
 - hooks for menu side panel, administration screen – could be used in jsp via taglib
- OpenMRS-build.properties should allow for a list of modules to be included during build (either a list or a series of boolean flags — e.g., OPENMRS_MODULE_FORMENTRY = 1, OPENMRS_MODULE_REPORTING = 1)
- RG updates
 - XML HL7 and FormEntry development
 - New [project management tool](#)
- Task Scheduling (in case Justin wants to talk about this a bit)
- Do we want a real logo? Or are people satisfied with Burke's artistic "talent"?
 - Yes. Both teams will look into available artists to bring potential logos back to the group

Links to Java CAB extractors:

- <http://www.xwt.org/javasrc/org/xwt/util/>
- <http://www.kyz.uklinux.net/cabextract.php>
- Review patient table (health_center, civil_status)
- TODO: Both teams will look into available artists to bring potential logos back to the group
- TODO: PIH to add some tickets and think about timeline
- TODO: RG will spec out a pattern for module design & separation
- TODO: PIH will contact RG as you encounter issues modeling concepts
- TODO: Justin to create the worlds best task scheduler for OpenMRS and see if asynchronous calls can go through the task manager
