Overview

The Patient Flags Module OWA is an Open Web Application built using React & React-Redux in order to act as a front end for the Rest API supported by the Patient Flags Module. The web application consumes the Patient Flags Module Web API and has 4 Modules/Pages.

Features

- **Manage Priorities -**
 - View table of existing priorities - their name, indicator and rank.
 - Add New priorities - Select a name, numeric rank value and associated color indicator from a color swatch.
 - Modify existing priorities.
 - Delete priorities.
- **Manage Tags-**
 - View table of existing tags.
 - Add New tags- Select a tag name, which user group(s) the tag is visible to and Display points (patient dashboard or patient header) .
 - Modify existing tags.
 - Delete tags.
- **Manage Flags-**
 - View table of existing flags.
 - Add New flags- Select a flag name, an associated group of tags and a priority for the flag. Select whether flag is enabled or disabled.
 - Modify existing flags.
 - Delete flags.
 - Filter flags by tags.
- **Search-**
 - Find patients associated with a particular flag.
 - Display Patient particulars, associated tags and flag enabled status.

Installation

The OWA is packaged along with the Patient Flags Module.

- Installation instructions for Module can be found here - [Patient Flags Module Documentation](#).
- Independent OWA installation instruction can be found here - [Patient Flags Module OWA Developer Guide](#).

Pages

Flags
