

2019-Oct-09 Patient Chart 1.1.0 - Navigation testing | Usability Testing

Testing Resources

Figma Prototype: [Figma Link to Interactive Prototype](#)

For Usability Testing Guide see: [Full Length Guide](#)

Tasks

TASK 1. Lets say you are seeing this patient for the first time. How would you look through the patient's past medical issues?

Goals

- See how user navigates to conditions
- See how user navigates away from conditions

Follow up questions

- What information here do you think you can see more information about?
- Let's say you want to view the most recent diagnosis first, how would you click to do that? (note: this prototype doesn't sort the list)

TASK 2: You want to review the patient's allergies, how might you do that?

- Ask this question when the patient is deep within several pages (e.g. History / Conditions / HIV)
- This will help see how the user navigates away from that part of the chart to the other part of the chart

Follow up questions

- What other information about allergies would you like to see?

General Questions

- See if the user is able move from the Chart page to either a first level page (e.g. Chart / History), and if they are also able to move from the Chart page to a deeper piece of information, (e.g such as Chart / History / Conditions / HIV). Perhaps ask what information they see on each page?
-

Note Testing

At this time we are not really testing the specifics of how the child pages from the main page are designed or the content on them.

But if people are interested in commenting on them, its always good to hear feedback.
