

Module Resources

The resources folder is located in the [module](#) structure at:

```
/omod/src/main/webapp/resources
```

In a non-mavenized module, it would be at

```
/web/module/resources
```

This folder may contain javascript, css, images, etc.

A file named taskpane.css in the resources folder for the module formEntry can be accessed via <http://../openmrs/moduleResources/formEntry/taskpane.css>.

To add it to your jsp page just do the following.

```
<openmrs:htmlInclude file="/moduleResources/formEntry/taskpane.css"/>
```

The reason the files cannot be kept in the folder /web/module along with the other jsp files is due to the Spring redirection taking place. The jsp files are accessed either by a redirect from their corresponding .htm file or via setup in the module's [application context](#) file.
