Introducing OpenMRS 2.1

Several months ago, the OpenMRS developer community decided that we needed a better release process. **We agreed that we would aim to release OpenMRS twice a year, and the platform annually.** Our goal was to release OpenMRS 2.1 by September 2014. We just barely missed that goal, but today, in early October, I'm happy to **announce the release of OpenMRS 2.1!**

This release doesn't bring many user-visible new features to the reference application (the Allergy functionality is nice!), but it has allowed us to focus on refactoring and automating our release process. And further, it gives us a chance to illustrate how an OpenMRS reference application release contains hundreds of under-the-hood improvements to modules that implementers and developers can leverage.

First, I'd like to give a special thanks to **Cintia Del Rio**, who contributed a huge amount to automating our module release processes, both by helping conceptualize the approach, by setting up bamboo plans, and by documenting the process. We should schedule time on a call to show the new approaches (automation is great!) and work through some last kinks (we have a lot of interdependent modules). Also, **Mário Areias** popped up out of nowhere to fix broken builds at odd hours just because he noticed them through CI emails, and **Mark Goodrich** did maven releases for me when I lost my nexus password.

I'd also like to thank **Geoffrey Wasilwa**, **James Arbaugh**, **Alexis Duque**, and **Lluís Martínez** for answering my last-minute calls for help and getting tickets done fast.

Feature highlights from OpenMRS 2.1:

- **Allergy List** (design led by **Jonathan Teich**, BA work by **Shasha Liu**, dev work by Daniel, Wyclif, **Soldevelo**, and others)
- **Implementation-defined forms** in the new UI
- **Atlas module** (summer of code work by **Alexis Duque**)
- **Built on OpenMRS Platform 1.10** (just released a couple weeks ago)
- **34 Modules** under the hood

OpenMRS 2.1 includes new versions of lots of modules. Some highlights of new features since OpenMRS 2.0:

- App Framework has improvements to the [context model](#) and it's easier to apply this to [URL templates](#)
- EMR API supports the new order entry API via the [encountertransaction](#) web resource
- HTML Form Entry has 30 tickets, including [uploading and viewing files](#)
- ID Gen can now generate identifiers of [variable length](#)
- Reporting has >90 tickets closed, including [Visit data sets](#)
- REST has 30 tickets closed, including [i18n of display names](#), and support for the new order entry API
- UI Commons now includes angular services for calling our REST API, and improvements to the Simple Form UI framework
- [Metadata Deploy](#) (built by I-TECH for Kenya EMR) is a better way for a distribution to set up its packaged metadata

Indeed, there is way more than I can describe here. See the Bundled Modules and Closed Issues section below.

As always, **Daniel Kayiwa**, **Rafal Korytkowski**, **Wyclif Luyima**, **Burke Mamlin**, **Michael Downey**, and **the Infrastructure Team** made big contributions that would take too long to enumerate.

Contributors

Thanks to the complete list of code contributors to OpenMRS 2.1:

Alexis Duque, Andrew Szell, Angshuman Sarkar, Aniketha Katakam, Anton Kravchenko, Arathy-mac, Benjamin Wolfe, Burke Mamlin, Cintia Del Rio Calvo, Cosmin Ioan, Damian Szafranek, Damitha Kithmal, Daniel Kayiwa, Darius Jazayeri, Deepak N, Filip Biedrzycki, Geoffrey W Wasilwa, Gitahi Ng'ang'a, Glauber Ramos, Harsha Kumara, Hemanth, Jakub Kondrat, Kaweesi Joseph, Krzysztof Kaczmarczyk, Lech Rozanski, Lee Breisacher, Lukas Breitwieser, Madawa Soysa, Marek Szukalski, Mark Goodrich, Mihir, Mike Seation, Miss Beens, Mujir Shaikh, Mário Areias, Nehashri P L, Neissi Torres Lima, Nicholas Ingosi Magaja, Nyoman Ribeka, Pamela Canchanya, Pawe Muchowski, Przemyslaw Gierszewski, Radek Puzdrowski, Radoslaw Puzdrowski, Rafal Korytkowski, Rohan Poddar, Rowan Seymour, Saptarshi Purkayastha, Shruthi Dipali, Suraj Ponugoti, Sushmitha Rao, Vinay Venu, Vinkesh Banka, Wesley Spencer See, Willa Ahmed, Wyclif Luyima, hemanths, indraneelr, ukasz Gsior

-Darius Jazayeri

Bundled Modules and Closed Issues

Module	Version in OpenMRS 2.1	Version in OpenMRS 2.0	Closed issues
Allergy API	1.0.1	not included	included in RA
Allergy UI	1.0	not included	included in RA
App Framework	2.2.1	2.1	see in JIRA
App UI	1.2.2	1.1	included in RA
Atlas	2.1	not included	
Calculation	1.1	same	
Core Apps	1.4	1.2.1	included in RA
Data Exchange	1.2	1.1	RA-403
EMR API	1.4	1.1	see in JIRA
Event	2.1	same	
Form Entry App	1.0	not included	included in RA
HTML Form Entry	2.4	2.2.1	see in JIRA
HTML Form Entry Extensions for OpenMRS 1.9	1.4	same	
HTML Form Entry UI Framework Integration	1.1	1.0	see in GitHub
HTML Widgets	1.6.5	same	
ID Generation	2.9.1	2.7	see in JIRA
Metadata Deploy	1.2	not included	see in JIRA
Metadata Mapping	1.0.1	same	
Metadata Sharing	1.1.8	same	
Name Phonetics	1.4	same	
OpenMRS UI Framework	3.2.1	same	
Provider Management	2.2	2.1	see in JIRA
Reference Application (RA)	2.1.1	1.0.1	see in JIRA
Reference Demo Data (optional)	1.3	1.0	included in RA
Reference Metadata	2.1.1	1.1	included in RA
Registration App	1.0	same	
Registration Core	1.0	same	
Reporting	0.9.2.1	0.8.1	see in JIRA
Reporting REST	1.3	not included	
Rest Web Services	2.6.9 d2016	2.4	see in JIRA
Serialization Xstream	0.2.7	same	
UI Commons	1.3	1.2.1	see in JIRA
UI Library	2.0.4	same	

Closed Issues in Reference Application modules

Type	Key	Summary
Story	RA-417	Roles and Privileges using Metadata Deploy
Bug	RA-403	Export concepts preserving IDs for OpenMRS 2.1
Story	RA-401	OpenMRS 2.1 should be based on OpenMRS Platform 1.10
Bug	RA-399	Error when you click to "Find Patient Record": Cannot format given Object as a Date
Story	RA-397	Top-level administrative apps
Story	RA-396	Include a "sysadmin" user in the demo data
Story	RA-393	Implementation-defined forms in Reference Application
Story	RA-392	Disable Awaiting Admission app

Story	RA-391	Remove reportingui from the refapp distro
Story	RA-390	Disable Patient Relationships with a feature toggle
Epic	RA-389	Create upgrade path from OpenMRS 2.0 to OpenMRS 2.1
Improvement	RA-387	Core Apps: Improve patient dashboard header to display multiple identifiers if exist for an extra patient identifier type
Bug	RA-380	Active Vists displays incorrectly in Firefox
Bug	RA-379	User session location is not updated when changed
Improvement	RA-378	Remove superfluous RA home heading
Story	RA-375	Include Atlas in OpenMRS Distribution
Improvement	RA-363	[Tech] Refactor app context model to be closer to our ideal representation
Story	RA-362	[Tech] fragment that includes and renders all extensions for an extension point
Story	RA-356	Find Patient app template in core apps should be configurable with breadcrumbs
Bug	RA-351	Fix Reference Metadata build
Story	RA-347	Tech Story: Add list of allergens and reactions
Bug	RA-343	Include Process HL7 task
Story	RA-328	Create static demo data for the reference application
Improvement	RA-324	Core Apps: EncounterDispositionTagHandler: Admission disposition should not be allowed if a patient is already admitted
Improvement	RA-322	Core Apps module should not rely on the activeVisit being injected by the appui module
Epic	RA-304	Implementation-defined forms should be available through the RA user interface
Story	RA-271	Modules should be able to add content to the clinician facing patient dashboard
