Assigned to	

Abstract

Common Lab Module is a simple module which allows users to manage patients' laboratory test orders, specimen samples and test results. At present, it is based on legacy UI and has not been made compatible with Reference Application UI. This project aims to extend this module and build an Open Web App using OpenMRS's Reference App UI features.

Project Champions

Skills Needed

1. Understanding of OpenMRS REST API
2. JavaScript
3. Hands on experience with AngularJS or ReactJS is a big plus

Objectives

1. Create a user friendly UI to manage metadata, patients' test orders, specimen samples and test results.
2. Improve the method of handling hierarchical grouped test results.
