Platform Unsupported Releases (EOL)

OpenMRS can only support up to three released versions at a time (the current release and then two versions back).

What does it mean to be End Of Life (EOL)?

**Bugs are no longer backported to these versions**

We will not be backporting and committing patches to that release's folder.

**No longer supported by core developers**

Bug reports for end of life versions will be answered with 'please upgrade to a supported version and confirm it is still an issue'. We will not be releasing new maintenance point releases in that line.

**Unsupported Releases**
