

Reference Application 2.6 Release Issue Tracking

Reference Application 2.x releases are different than OpenMRS platform releases (like 1.11.0). Platform releases usually consist of alpha, beta releases and have Sprints to complete tickets in a short span of time. Reference Application 2.x is a collection of modules and hence its release consists of releasing all the modules planned to be included in the 2.x release and testing if all of them function collectively.

In the case of 2.6, the release is planned for the end of April 2017. Though the testing might not be as extensive as a Platform release, a user acceptance testing is necessary. All the modules that are planned to be released in 2.6 need to be in a release ready state and we need your collective collaboration on making this happen.

UAT until 2017/05/03 2 p.m. UTC at <http://uat-refapp.openmrs.org/>

Release date: 2017/05/04 2 p.m. UTC

Included Modules
