

# Add/Remove Regimen

This tutorial will provide a quick guide on how to add or remove drugs from a patients regimen  
**Assumption:** User has found and selected the patient.

Step by step guide:

1. Navigate to "**Regimens**" under the patients profile tabs
2. Click on "**Add/Change Regimen**"

The screenshot shows the 'Regimens' tab interface. At the top, there are navigation tabs: Overview, Regimens, Visits, Demographics, Graphs, and Form Entry. Below these is a section titled 'Current and Future Regimens' with a table header: Item ordered, Dose/Units, Frequency, Start date, Scheduled Stop Date, Instructions. Under this header, there are three categories: 'ANTIRETROVIRAL DRUGS (No orders)', 'TUBERCULOSIS TREATMENT DRUGS (No orders)', and 'OTHER REGIMENS (No orders)'. A button labeled '(+) Add/Change Regimen' is visible. A dashed box highlights two options: 'Add a standard drug regimen' with a list of predefined regimens (e.g., 3TC + d4T(30) + NVP (Triomune-30)) and 'Add your own drug regimen' with input fields for Drug, Dose, Frequency (1/day x 7 days/week), and Start date (dd/mm/yyyy).

3. You may select a predefined combination of drugs depending on the diagnosis on the left side "**Add a standard drug regimen**"
  - a. Or for each drug repeat the following steps:
    - i. Select the drug name under the drop down
    - ii. Type in the dosage prescribed (according to the drug selected the measurement units will vary) Ex. mg, ml, g etc.
    - iii. Select the frequency on a daily and weekly scale
    - iv. Click on the Start Date field and a calendar will aid the selection process
4. Click **Add**

The screenshot shows the 'Regimens' tab after adding a regimen. The table now contains two entries: 'Triomune-30' (1.0 tab(s), 2/day x 7 days/week, 10-May-2013) and 'DDI 125' (33.0 mg, 1/day x 7 days/week, 10-May-2013). The 'Triomune-30' entry has a 'Date Stopped' field and a 'Reason' dropdown menu, both highlighted in yellow. Below these fields are 'Stop' and 'Cancel' buttons. There are also 'Delete' and 'Cancel' buttons next to the 'Reason' dropdown. At the bottom, there are buttons for 'Stop this category', 'Delete this category', and '(+) Add/Change Regimen'.

5. Adding regimen has been completed
6. To **Stop** the drug enter the date stopped and the reason why.  
 By stopping the drug will allow you to easily resume it in the future  
 The drug will always be under the history of the patients records
7. To delete a drug, select the reason then click "**Delete**"  
 Deleting a drug will permanently delete the drug of the patients record.
8. Following the same procedures you may also "**Stop this category**" and "**Delete this category**" using steps 6 and 7.
