What's New?

This release is OpenMRS Platform 2.4.0 and is a major release version of the OpenMRS API that follows 2.3.2. It contains many under-the-hood updates to have a more modern tech stack. A number of libraries have been upgraded in this release and new features have been added such as support for OpenMRS to run on PostgreSQL, replacing the original FHIR module with the new and improved FHIR2 module which includes support for FHIR R4, upgrading other libraries e.g Log4j 2, JUnit 5, etc, switching domains from hibernate xml mappings to annotations, upgrading of the major core libraries like spring, hibernate and liquibase, adding support for MySQL 5.6 - 8.0, plus Java 8 - 15 support.

Release Manager: CLIFF GITA, with mentorship from Kaweesi Joseph and Nathan Ruhanga, and support from Herbert Yiga
