Clinical Views

What are Clinical Views?

- **Goal:** To give staff an easy way of finding condition-relevant or program-relevant information.
- **Why:** Clinicians often have a focus-area they are interested in, e.g., a clinician in an HIV Outpatient clinic has specific information, labs, medications etc that they are most interested in reviewing.
  - I want a set of pages that have widgets on them related to a particular clinical scenario, so that it’s easier for me to find the information I need for a particular care issue for a patient.

Examples:

- **HIV Adult Care**
  - Summary/overview page with HIV-relevant information (e.g., ART start date)
  - Lab page with HIV-relevant labs
- **NCD View**
  - **Overview with NCD-relevant information**
  - **Labs** - Highlighting and trending labs of special interest in NCD care

How can Clinical Views be set up / configured?

**Vision:** Ability to use configuration to define your clinical views (the view name, page names, and which extensions in what order)

Example of our vision for Config in JSON:

```
Example Editor Online.

New document 1

{ "clinical_views": [
  { "name": "HIV Clinical View", "page": []
    "name": "NCD Clinical View", "page": []
    "extensions": ["medications", "extension2"],
    "note": []
  ],
  { "name": "Diabetes Clinical View", "medications": [],
    "note": []
  },
  { "name": "HIV Clinical View", "page": []
    "name": "NCD Clinical View", "page": []
    "extensions": ["medications", "extension2"],
    "note": []
  }
]
```

**Brainstorming a better name:**

- Clinical summaries
- Care summaries
- Deep dive
- Drill-down
- Care views
- Care area
- Clinical program
- Care programs
- Care service
- Care dashboards
- Focus area
- Focus
- Summary
- Focus summary
- Care apps
- Care pages
- Care canvas
- Clinical canvas
- Care program canvas
